EXPERIMENT – 8

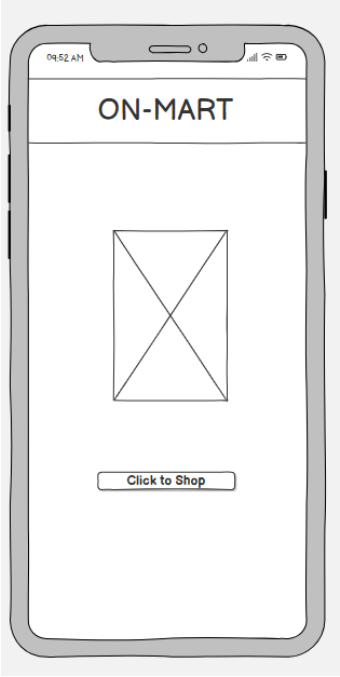
NAME: ROSHNI R **ROLL NO:240701443**

Create storyboards to represent the user flow for your application using Balsamiq

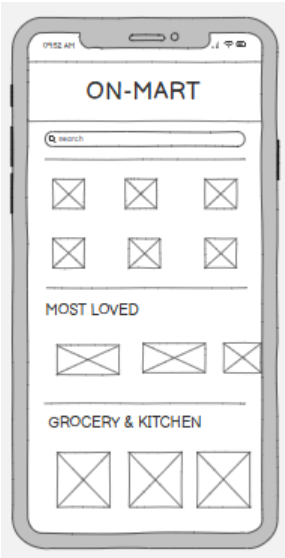
Objective:

The main objective of this experiment is to design and represent the user interaction flow of a mobile-based grocery delivery application using Balsamiq. This application, ON-MART, helps users browse products, select items such as fruits and groceries, add them to the cart, choose payment methods, and place orders. The storyboard visually demonstrates how users navigate through different screens, from product selection to order confirmation, ensuring a smooth and user-friendly shopping experience.

Screen 1: START SCREEN



SCREEN 2:HOME SCREEN



The Home screen is the first interface that the user interacts with.

Features:

- A search bar is provided at the top to allow users to search events easily
- A menu icon for navigation and profile options
- A list of events displayed in card format:
    - Birthday Party
    - College Fest
    - Wedding Plan
- Each event includes:
    - Image placeholder
    - Event name
    - Event date
- A **"+ Create Event"** button
- Category buttons such as Birthday, Meeting, Wedding

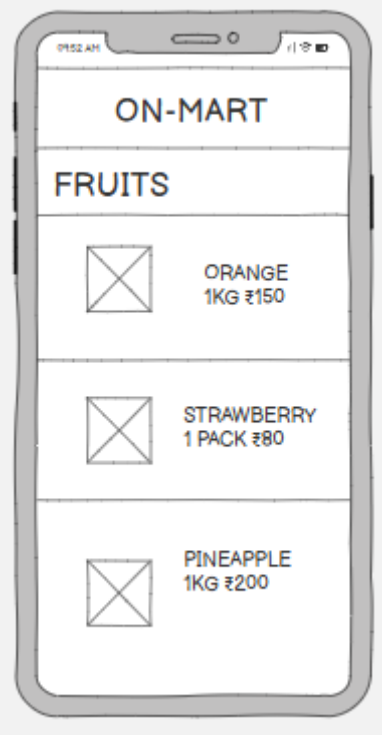
User Interaction:

- The user can scroll through available events
- The user selects an event to view more details
- The user clicks on **Create Event** to add a new event

Purpose:

This screen helps users explore and manage their events efficiently.

Screen 3: Create Event Screen



This screen allows users to create a new event.

Features:

- Input field for Event Name
- Input field for Location
- Date picker to select event date
- Description text area
- Dropdown for Event Type
- “Save Event” button

User Interaction:

- The user enters event details
- The user selects date and event type
- Clicks on **Save Event** to create the event

Purpose:

This screen allows users to input and store event details easily.

Screen 3: Event Details Screen

This screen shows complete information about the selected event.

Features:

- Event title (e.g., Birthday Party)
- Event date and location
- Event description
- Buttons:
    - Manage Guests
    - View Budget
    - Edit
    - Delete

User Interaction:

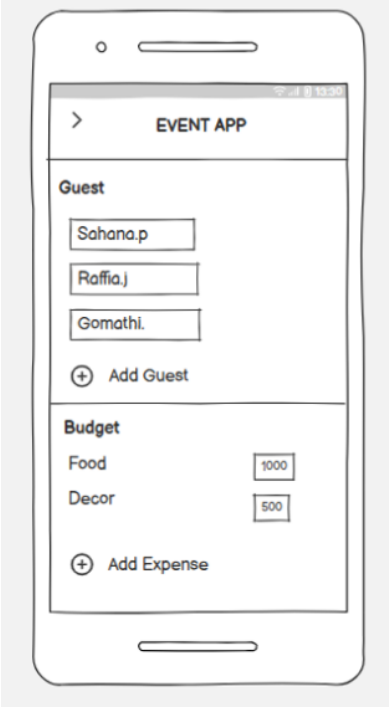
- The user views event details
- Navigates to manage guests or view budget

- Can edit or delete the event

Purpose:

This screen helps users manage and control a specific event.

Screen 4: Guest & Budget Screen



This screen combines guest management and budget tracking.

Features:

Guest Management:

- List of guests:
    - Aisha – Coming
    - Rahul – Pending
    - John – Not Coming
- "+ Add Guest" button

Budget Tracking:

- List of expenses:
    - Food – ₹2000
    - Decor – ₹1500

    - Venue – ₹5000
- Total amount displayed
- “+ Add Expense” button

User Interaction:

- The user adds or updates guest details
- The user tracks and updates expenses

Purpose:

This screen helps users organize guests and manage event expenses efficiently.

Conclusion:

The Mini Event Planner application wireframe successfully demonstrates the user flow from event creation to management. It provides a simple and efficient interface for organizing events, managing guests, and tracking budgets.
