EXP : 06 RAD Model (Spotify Clone – Listenify)

NAME: ROSHNI R REG NO:240701443

AIM

To simulate the lifecycle stages of UI design using the **Rapid Application Development (RAD)** model and develop an interactive prototype using Figma.

DESCRIPTION

RAD (Rapid Application Development) focuses on quick development and continuous user feedback. In this experiment, a music streaming application UI (**Listenify – Spotify Clone**) was designed and prototyped using Figma.

PHASE 1: REQUIREMENTS PLANNING

- Identified main features of the application:
    - Home page with search option
    - Song categories (Meditation, Happy, Travel)
    - Song description page
    - Playlist section
- Defined user actions:
    - Searching songs
    - Browsing categories
    - Viewing song details
    - Managing playlists

PHASE 2: USER DESIGN

- Created wireframes and UI screens in Figma:
    - Home Screen
    - Song Page
    - Song Description Page
    - Playlist Page
- Designed layouts with buttons, images, and navigation elements
- Added basic interactions to simulate navigation between screens

PHASE 3: CONSTRUCTION

- Developed an interactive prototype using Figma
- Linked all screens using clickable buttons
- Tested navigation and user flow
- Improved UI based on feedback and usability

PHASE 4: CUTOVER

- Finalized the prototype design
- Shared the project using Figma link
- Prepared the interface for demonstration

OUTPUT

The UI prototype includes multiple screens such as Home, Song Page, Song Description, and Playlist for the **Listenify** music app.

RESULT

Thus, the UI design of a music streaming application (**Listenify**) was successfully developed using the RAD model and implemented using Figma.

SONG DESCRIP
LISTENIFY
Meditation Songs:
Listen to mesmerizing music....
Listen to mesmerizing music....
Listen to mesmerizing music....

PLAYLIST
LISTENIFY
